

EDITORIAL

“Medical science has proven time and again that when the resources are provided, greater progress in the treatment, cure and prevention of the disease can occur.”

- Michael J. Fox

It is a great opportunity for me to be a part of this only Peer reviewed Homoeopathic Journal in Asia. This being my first editorial for this journal, I would like to take this opportunity to greet all my colleagues, not only in the Homoeopathic field but also in all the medical fields. I would also like to request the Clinicians, Researchers, Professors and Students to contribute their findings in the form of articles in this journal, for the betterment of humanity and development of Homoeopathic Science.

Research has always been an interesting field as this looks into the aspects which everyone knows and brings out the new facets which no body has thought of. This journal was brought out with the intention to disseminate such information to the medical profession to attain what has been reflected in the quote mentioned above.

This is an ongoing discussion as to how Homoeopathy works rather how the ultra diluted solutions used as homoeopathic medicines work? The researchers are constantly working on this and here in this issue of the journal we present an article under the Fundamental Research section showing the difference in the super continuum spectra formed in plain ethanol and ethanol treated with homoeopathic medicines. A multicentric double blind homoeopathic pathogenetic trial of *Amoora rohituka* has been incorporated giving the information about the symptomatology of this drug produced in the provers. To ensure the quality of drugs, considerable amount of work needs to be done to evolve the standardization modalities and safety parameters. This issue of the journal presents a paper on ‘Standardisation of *Ammi visnaga* L. fruit – a homoeopathic drug’, which reflects the work done in this direction. It is equally essential to have clinical verification of the drugs which have been proved and standardized as per the norms. This issue also includes the article on clinical verification study of *Curcuma longa* and provides the symptoms of this medicine that have been verified clinically. Under Clinical research section we have brought the article - A prospective multicentre observational study to evaluate the role of Homeopathic therapy with a group of predefined homoeopathic medicines in the management of gastroenteritis. This is a reprint of the article that was published in International Journal of BioResearch. As per the Council’s Extra Mural Research policy, the findings of the research project going on at various institutes and research centers are also brought out through this journal. In this issue an article on the effects of homoeopathic medicines in cases of ovarian cysts has been published.

I strongly believe that the information made accessible in this issue will be of immense interest and help to the profession. I again request the readers to contribute in our journal in the form of articles, suggestions etc.

Best wishes.

(Dr. Alok Kumar)
