

## EDITORIAL

*CCRH Quarterly Bulletin* had been a regular publication of the Central Council for Research in Homoeopathy, publishing and disseminating the research findings of the work done by the Council and also by other eminent researchers in Homoeopathy. However, the name 'Bulletin' gave an impression of the publication being a listing of events at the Council rather than being a compilation of research findings in the field of Homoeopathy.

Therefore, a need was felt to upgrade the quality of publication, which was done over the period of past few years. Various new initiatives were therefore taken in this regard. The Bulletin was divided into different sections, viz. Fundamental Research, Clinical research, Clinical Verification, Drug Proving, Drug Standardization, etc. Recently, the research papers were also sent for *peer review* to ensure publication of quality research articles. Keeping the up-gradation in mind the next obvious step was to remove the misnomer. The publication has now been named as ***Indian Journal of Research in Homoeopathy (IJRH)***. It is an endeavour of the Council to publish and disseminate the findings of quality researches done by various scientists in India, working for the progress of Homoeopathy.

This is the first issue of the Indian Journal of Research in Homoeopathy (IJRH), which contains articles on Fundamental Research, Clinical Research, Clinical Verification, Drug Proving and Drug Standardization etc. One interactive column is added in IJRH to initiate dialogue with the readers on certain interesting issues.

I have immense pleasure in keeping the first issue of Indian Journal of Research in Homoeopathy before the profession.
